

# Community Conversations

"We are afraid of the cost, more so when seeing a specialist."

"We need a more emphatic health system. Last week a Hispanic person I know was denied an appointment. When I went with her, they changed their mind and she was seen in 2 days."

"People who are not fluent in English struggle to make an appointment."

"We need information and research. Some policies are difficult to navigate and don't work for undocumented people."

## NOT WELCOMING

"The health system is not welcoming. We need nicer people."

"Our community does not know about the benefits of preventive medicine."

"There is no information. There are silent diseases. Some people don't have insurance or time."

"There is a huge need of health care professionals everywhere. They should take advantage of the foreign health care workers already here by facilitating a path for accreditation."
